Dr. Joseph CHOUKROUN

PRF Seminar

Theoretical training course

24th October 2025

PRF & Sticky Bone : *The latest updates*
Benefits of osteoimmunology
in bone management

Course in English

Program

PRF & Sticky Bone: *The latest updates.* Benefits of osteoimmunology in bone management.
Soft tissue management and bone reconstruction with PRF. Lessons from osteoimmunology.

By Dr Joseph CHOUKROUN

1/ PRF: Latest updates

Preparation with Pompac: clots, membranes, patches, plugs, punches.

Indications: Socket preservation, soft tissue, sinus, bone grafts, immediate loading.

2/ Guided open-wound healing with PRF: the solution with less stress

New strategy for managing extraction with or without implantation & soft tissue defects.

3/ Management of bone defects in sockets and around implants

Osteo-immunology: how the immune system controls bone formation and regulates bone resorption.

Biomaterial selection based on immune response.

Sticky bone for faster bone formation.

Influence of sutures on soft tissue healing and wound closure.

Conditions of implantation in bone grafts.

4/ Peri-implantitis has an immune origin

Immune mechanisms and solutions to prevent peri-implant bone loss.

5/ Demonstration:

Handling of clots, membranes. Sticky bone preparation and application in sockets.
